## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-5 and 9-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Friend (U.S. Patent # 4,286,316).

Friend discloses claimed subject matters an inductive electric energy transmission circuit (figure 1), including an oscillating circuit (figure 1, item 16 and 18), a push-pull

circuit (figure 1, item 22 and 56), a control circuit (figure 1, item 4), first and second control transistor (figure 1, item 26 and 54), to control second switching transistors (figure 1, item 8) and a frequency generator (column 4, line 20-30), a square wave signal generator (column 1, line 20-35), a resistor (figure 1, item 28 and 58),

3. Claims 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Kumbatovic (U.S. Patent # 4,614,897).

Kumbatovic discloses claimed subject matters an inductive electric energy transmission circuit (figure 1), including an oscillating circuit (figure 1, item 52), a push-pull circuit (figure 1, item 56,58), a control circuit (figure 1, item 10), first and second control transistor (figure 1, item 14 and 16), to control second switching transistors (figure 1, item 12 and 18) and a frequency generator (figure 1, item 34), a square wave signal generator (figure 1, item 50). In regards to claims 22 and 23, above circuit can be used for both appliances.

### ***Allowable Subject Matter***

4. Claims 6 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2838

5. For method claims 16-19, note that under MPEP 21 12.02, the principles of inherency, if a prior art device, in its normal and usual operation, would necessarily perform the method claimed, then the method claimed will be considered to be anticipated by the prior art device. When the prior art device is the same as a device described in the specification for carrying out the claimed method, it can be assumed the device "1 inherently performs the claimed process. In re King, 801 F.2d 1324, 231 USPQ 136 (Fed Cir. 1986). Therefore the previous rejections based on the apparatus will not be repeated.
